The Seniors: Alexandre paul, Juville Roseline, Ansel Michèle.

The Facilitators : Bernet Didier, Ansel Michèle.

The young Lola goes to the edge of the pond of “benette” in the heart of the forest of Senonches, one of the most beautiful forest in France, in the hope of discovering the secret of the salamander.

There she meets a little amphibian, which takes her to discover the inhabitants of the Benette, the wildlife: toads, frogs, newts, salamanders, insects and then delicate flora: “littorelle”, swimming Fluteau and water lilies, rare species and preserved.

Lola, will make the acquaintance of a young scientist of the Nature Conservatory of Centre Region, he reveals the hidden beauties of the small world of the pond.

Then the salamander takes her in the forest and helps her spot the different trees and informs her on trades and the ancestral human activities; men who were living through the exploitation of forest and industries, tile, glass and lime kilns.

The conservation of this protected area and its inhabitants, is that the secret of the salamander?
